

Frequently Asked Questions

Q: What material is EdgePro® Poly Landscape Edging manufactured from?

A: EdgePro® Poly Landscape Edging products are manufactured from medium-density polyethylene (MDPE). MDPE is durable and will not rust, crack, rot or deteriorate due to weather exposure. Dimex custom blends MDPE in-house to the proper material specifications to give landscape professionals an edging product that balances strength, flexibility and resistance to weathering.

Q: How do EdgePro® Poly Landscape Edging products compare to other products on the market?

A: EdgePro® Poly Landscape Edging products are in the heavier range of what's available on the market. The entire EdgePro® product line has been developed with the contractor in mind. There's a significant difference in the weight, performance, and overall quality between EdgePro® products and many of the polyethylene landscape edging products currently found in the market.

Q: How is the bundled landscape edging packaged and shipped?

A: The bundles are not palletized, meaning they're hand-loaded onto trucks and removed in the same manner. Hand loading is the industry standard for the higher-grade landscape edging products. If a customer requires palletized bundles, Dimex can provide a custom quote, as this reduces the number of pieces that can fit in a standard 48' or 53' van.

Q: Are there minimum order quantities and/or increments for bundles?

A: Yes. The minimum landscape edging order is 50 pieces (10 bundles). The increment is 50 pieces, as well (i.e., 50/100/150/200...).

Q: Are there maximum order quantities for LTL and truckload?

A: Yes. Dimex uses several regional and national LTL carriers for shipment of bundled landscape edging. Because of the handling aspect of the bundled landscape edging, each of the LTL carriers limits the amount per shipment to 250 pieces (50 bundles). This means that an order for 500 pieces will be shipped in 2 separate shipments of 250 pieces each, if shipped on an LTL carrier. For truckload shipments, Dimex can fit a maximum of 6,000 20' bundled lengths on a standard van (2 stacks of 3,000), which occupies almost 41' of trailer space from floor to ceiling.

Q: Can Dimex manufacture lengths of landscape edging, other than 20'?

A: Yes. Dimex manufactures 40', 60', and 100' coils, currently. If a customer requires different lengths in bundles or coils, Dimex can provide a custom quote. Minimum quantities may apply.

Q: If accessories are "included" in the price, how are they packaged?

A: When landscape edging includes a connector, typically connectors are provided in bulk 25-count boxes, separate from the edging. Dimex can pre-install connectors in the landscape edging, if specified. When landscape edging includes a stake kit, typically stake kits are provided in bulk 50-count boxes, separate from the edging.

Q: Does Dimex recommend staking landscape edging?

A: Dimex always recommends staking landscape edging to hold it in place, particularly in climates that experience freeze-thaw cycles.
